

**Part Number:** HD-FXD-6-DT-E, HD-FXD-FB-8-DT-E

**Description:** Heated Dual Touring Saddle

**Fitment:** 2006 Harley-Davidson Dyna-Glide

**Revision:** 1

Tools Required	Parts List
10mm socket or combination wrench Phillips head screwdriver	1 Wiring harness 1 Fuse adapter, small 3 Tie wraps (zip ties) 1 Heated Dual Saddle (of course)

1. Remove stock seat, battery cover and fusebox cover. You do not need to remove the battery.

2. Refer to Figure 1 for a look at a completed installation. Notice the pigtail harness wires directly to your bike and remains in place even with the saddle removed. You should leave about twelve inches of pigtail available to keep saddle installation easy.

3. Start by routing the pigtail under the chassis and along the top of your fender as shown in Figure 2. Route the red wire towards your fusebox and the black wire towards your battery.

4. Slip the battery out enough to give yourself access to the negative terminal and disconnect. You will be installing the black wire of the pigtail to this terminal later, but leave it out for now as a safety precaution. You should always disconnect the battery negative terminal when working on the electrical system of your bike. (Fig 3.)

5. Route the red (hot) wire through the back of the fuse box on your bike. Then attach the fuse adapter to the pigtail harness' positive wire (red).

6. Look for the **Accessories** fuse in the fusebox and remove it. Place this fuse in the empty slot of the fuse adapter as shown in Figure 4.

7. Slip the fuse adapter, with both fuses, into the **Accessories** slot of your fusebox in place of the fuse you just removed in step 6. Reinstall the fusebox cover.

Continued...

8. Install the black wire onto the negative terminal of your battery under the original ground as shown in Figure 3. Tighten securely and slide your battery back into place. You may now reinstall the battery cover.

9. Collect together excess wire remembering to leave approximately 12 inches of harness unrestricted. Bundle neatly and attach the extra wire to the frame with zip ties as shown in Figure 5.

10. Install the Corbin heated seat by securing the front of the seat in place with the nose tongue and then carefully lifting up the back of the saddle to plug the pigtail harness into the seat.

**NOTE:** To get the best fit, the bracket at the front and the rear are adjustable. Remember to use a thread lock product such as Loctite® to secure the bolts back in place.

11. Check to assure that the back of the seat won't pinch any wiring when it is installed as shown in Figure 6.

12. Now test the heater to make sure it is working properly. Note that the heater will only come on when the ignition is in the ON position. Power switch should light up according to the position of the rocker switch.

13. If everything works as it should, just secure the back of the saddle to your fender like the stock seat and take it out for a spin!

Enjoy your saddle and many happy years of motoring.
