Tools	Parts List
Allen Wrench	

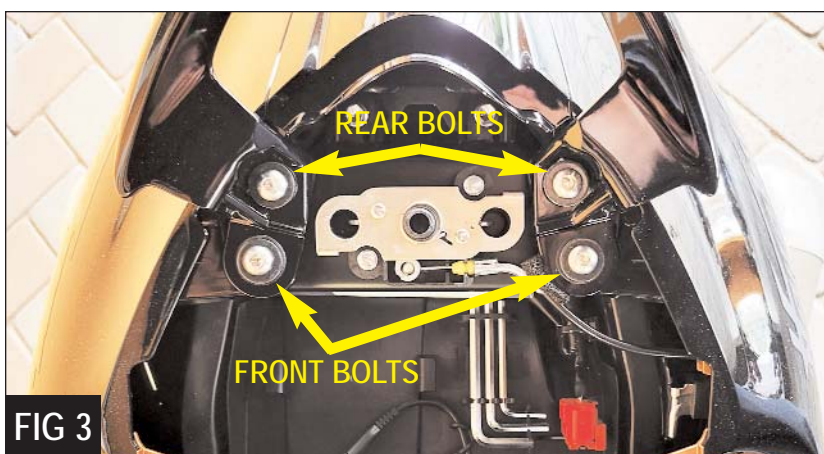

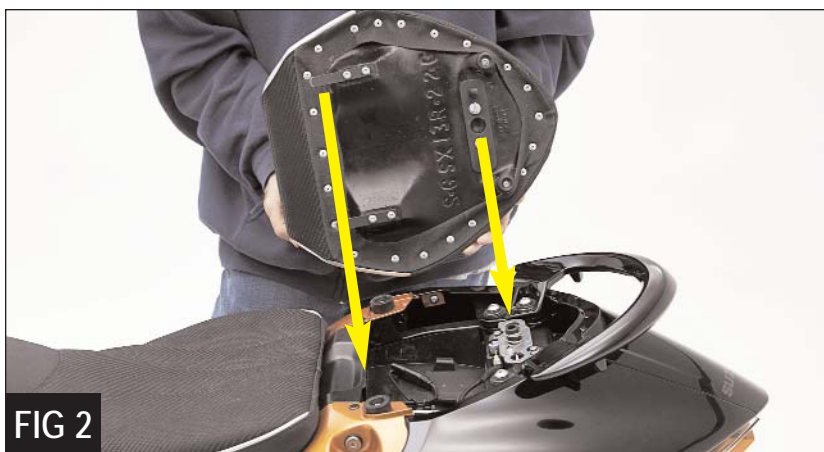

1. Remove your stock seat. Refer to your owner's manual if necessary.
2. Saddle mounts just like stock. Simply slip the two rear pegs into the rear chassis and align the front brackets where you removed the stock bolts. (Figure 1) Use the stock bolts to secure.

**NOTE:** Brackets offer a slight bit of adjustment to assure a perfect fit to your chassis.

3. To install the rear saddles, slide the front brackets into position, align the rear bracket over the stock key lock system and push down. (Figure 2)

**NOTE:** When using the Fastback seat, you will need to remove the passenger grab rail from the bike. Start by removing the four bolts on the grab rail (Figure 3). Remove the grab rail and reinstall the two front bolts and leave out the two rear bolts.

4. To remove the pillion seat, just turn the stock key on the side of the bike to release the lock.
